

ACKNOWLEDGEMENTS

The PWI gratefully acknowledges the contribution made by Richard Johnson as the principal author, Brian Counter as chief editor and Howard Smith as consultant metallurgist in the creation of this book and Brian Whitney and John Hempshall from Network Rail and Marc Clark from Transport for London who kindly peer reviewed this book.

We also recognise the support given by Thermit Welding (GB) Ltd, British Steel PLC and LBFoster in the development of the book. Also, the significant contribution from Jay Jaiswal, Paul Baker, Jay Benson and finally Peter Lugg (FPWI), a long-time supporter of this project and the source of much of the history of Rail and Rail Welding in Great Britain. Other members of the technical team include Ian Banton, Daniel Pyke, and Sean Gleason.

The book has been prepared with reference to Network Rail and Transport for London.

Production and printing of the volume has been led by Alison Stansfield, Marketing Director PWI with layout and formatting by Kerrie Pearson, Graphic Designer.

Photographs have been kindly provided by:

Richard Johnson, Howard Smith, London Underground, Jay Jaiswal, Network Rail, Thermit Welding (GB) Ltd, Railtech UK Ltd, Rail Technology.com, Cemex Rail Solutions, Rail One, LCR Ltd, Balfour Beatty Rail Technologies, Rail Infrastructure, Railway Gazette, Carillion, Colas Rail, British Steel, Tom Merrill, Chris Stratton.

Contents

INTRODUCTION	2
CHAPTER 1	20
INTRODUCTION	20
1.1 DEVELOPMENT OF THE BRITISH RAILWAY SYSTEM	20
1.2 THE EARLY YEARS OF RAILS	24
1.3 THE DEVELOPMENTS OF IRON AND STEELMAKING PROCESSES	28
1.3.1 The Bessemer steelmaking process	28
1.4 RAIL SECTIONS	32
1.4.1 Parallel headed rail	32
1.4.2 Bull head rail	33
1.4.3 Flat bottomed rail	35
1.4.4 Grooved (embedded) rail profiles	38
1.5 RAIL SUPPLIERS IN THE UK	39
CHAPTER 2	43
HISTORY OF RAIL WELDING	43
2.1 INTRODUCTION	43
2.2 THE RAIL EXPANSION CONTRACTION PROBLEM	43
2.3 THE EVOLUTION OF RAIL WELDING METHODS 1885 - 1910	46

2.3.1 Full fusion weld	47
2.3.2 Alumino-thermic pressure weld	48
2.3.4 Combined method	48
2.3.5 Electric arc welding	49
2.3.6 Oxy-acetylene welding	50
2.3.7 Oxy-acetylene pressure butt welding	51
2.4 DEVELOPMENTS 1910-1935	51
2.5 DEVELOPMENTS 1935 - 1960	54
2.6 DEVELOPMENTS 1960 - 1985	57
2.7 DEVELOPMENTS 1985 TO 1996	61
2.8 POST PRIVATISATION (AFTER 1996)	62
CHAPTER 3	65
CURRENT STANDARDS FOR RAILS AND WELDS	65
3.1 STANDARDS DEVELOPMENT	65
3.2 EUROPEAN STANDARDS FOR RAILS	67
3.3 UK NATIONAL STANDARDS FOR RAILS	73
3.4 CLASSIFICATION OF WELDING PROCESSES	75
3.4.1 Fusion welding	75
3.4.2 Solid phase welds	77
3.5 WELDING PROCESSES FOR RAILS	78

3.5.1 Stationary (fixed) processes	78
3.5.2 Mobile processes	79
3.5.3 Standards applied to rail welding processes	82
3.5.4 Standards for flash butt welding of rail	84
3.5.5 Alumino-thermic welds	85
CHAPTER 4	94
RAIL - MANUFACTURE, PROPERTIES AND WELDABILITY	94
4.1 THE USE OF IRON AND STEEL IN TRACK ENGINEERING	94
4.2 THE PRODUCTION OF IRON	94
4.3 THE METALLURGY OF IRON AND STEEL	96
4.4 STEEL TYPES	98
4.5 PRODUCTION OF STEEL	102
4.6 CONTINUOUS CASTING	104
4.7 THE MANUFACTURE OF RAIL	108
4.8 RAIL IDENTIFICATION	113
4.9 WELDABILITY	120
CHAPTER 5	122
RAIL - METALLURGY	122

5.1 EVOLUTION OF RAIL GRADES	122
5.2 RAIL STEEL METALLURGY	125
5.3 THE ROLE OF INDIVIDUAL ELEMENTS IN RAIL STEELS	127
5.4 PREMIUM GRADE RAIL STEELS	133
5.5 OTHER RAIL STEEL MICROSTRUCTURES	138
5.6 AUSTENITIC MANGANESE STEELS (AMS)	141
5.7 RAIL GRADE SELECTION AND PROPERTIES	146
5.7.1 Commercially available rail and wheel steel grades	147
5.7.2 Comparative properties of available rail steels	158
5.7.3 Fracture toughness	159
5.7.4 Rail fatigue	161
5.7.5 Rail foot residual stresses	163
5.7.6 Hardness	164
5.7.7 Tensile properties	165
5.8 THE METALLURGY OF RAIL WELDING	167
5.8.1 Overview	167
5.8.2 Flash butt welds	171
5.8.3 Alumino-thermic welds	177
5.8.4 Slow bend testing of welds	181
5.8.5 Residual stresses in welds	182

5.8.6 Welding of pearlitic rails to cast austenitic manganese crossings	183
CHAPTER 6	184
MECHANICAL RAIL JOINTS	184
6.1 INTRODUCTION	184
6.2 FEATURES OF FISHPLATE DESIGN	186
6.2.1 Fishplate components	187
6.3 BOLT HOLES IN RAILS	189
6.3.1 Cold bolt hole expansion	189
6.4 LOCATION OF JOINTS	190
6.4.1 Relative positions of joints on opposite rails	191
6.5 JOINTS FOR SPECIAL SITUATIONS	191
6.6 JOINTS WITH OVERLAPPING RAIL ENDS	193
6.7 INSULATED JOINTS	195
6.7.1 Development of insulated joints for CWR	196
6.8 CARE OF RAIL JOINTS	201
CHAPTER 7	206
WELDED RAIL JOINTS	206
7.1 INTRODUCTION	206
7.2 FLASH BUTT WELDING	206

7.3 MANUFACTURE OF LONG WELDED RAIL (LWR)	219
7.4 FLASH BUTT WELDING ON SITE USING MOBILE EQUIPMENT	230
7.4.1 Quality requirements	235
7.4.2 Mobile flash butt welding at site – a typical example	236
7.5 ALUMINO-THERMIC WELDING	240
7.5.1 Process development	241
7.5.2 The Alumino-thermic reaction	243
7.5.3 The alumino-thermic welding mixture	245
7.5.4 Manufacture of the alumino-thermic portion	250
7.5.5 Quality control	252
7.5.6 Alumino-thermic moulds	254
7.5.7 The crucible	262
7.5.8 Igniters	266
7.5.9 Mould sealing materials	267
7.5.10 Welding equipment	268
7.5.11 Permitted track and rail condition for welding	272
7.5.12 Welding processes for Vignole rails	272
7.5.13 The Thermit® SKV-E process	275
7.5.14 The Railtech PLA standard process	279
7.5.15 Other processes	282
7.6 INSTALLATION OF ALUMINO-THERMIC WELDS	287
7.6.1 The installation process - general requirements	290

7.6.2 Special requirements for rail stressing	290
7.6.3 The welding process	291
7.6.4. Competence and training	301
CHAPTER 8	306
IN-SERVICE PERFORMANCE OF RAILS	306
8.1 WHEEL - RAIL CONTACT FEATURES	306
8.2 DEGRADATION THROUGH WEAR AND DEFECTS	308
8.3 LOSS OF RAIL PROFILE THROUGH WEAR	309
8.4 HARDNESS AND WEAR RESISTANCE	310
8.5 RAIL FAILURES	319
8.5.1 Rail foot failures	319
8.6 FAILURES FROM WELD REPAIRS	321
CHAPTER 9	323
BROKEN AND DEFECTIVE RAILS	323
9.1 INTRODUCTION AND TERMINOLOGY	323
9.2 DEFECT CLASSIFICATION SYSTEMS	324
9.2.1 Normal rail features	326
9.2.2 Rail sections	327
9.2.3 Broken rails	328
9.3 RAIL DEFECTS	329

9.3.1 Inherent defects - manufacturing defects	329
9.3.2 Web Defects	348
9.3.3 Foot Defects	350
CHAPTER 10	356
ROLLING CONTACT FATIGUE (RCF)	356
10.1 INTRODUCTION	356
10.2 SUB-SURFACE INITIATED SQUAT TYPE rcf	357
10.3 SURFACE INITIATED RCF GAUGE CORNER CRACKING and HEAD CHECKS	359
10.4 CRACK DEVELOPMENT	360
10.4.1 Period to crack initiation	361
10.4.2 Position of initiation on rail head	364
10.4.3 Linear density of RCF cracks	364
10.4.4 Angle of RCF cracks on rail running surface	365
10.4.5 Growth of RCF cracks	366
10.5 HEAD DEFECTS	368
10.5.1 Shelling of the gauge corner	368
10.5.2 Shelling of the running band	370
10.6 GAUGE CORNER CRACKING (GCC)	373
10.7 HEAD CHECKING	375

10.8 SQUATS	377
10.9 WHEEL BURN	380
10.10 FIELD FLOW OR FIELD CRACKING	384
10.11 TONGUE LIPPING ASSOCIATED RCF	386
10.12 FALSE FLANGE DAMAGE	387
CHAPTER 11	388
WELD DEFECTS	388
11.1 INTRODUCTION	388
11.2 DEFECTS IN ALUMINO-THERMIC WELDS	388
11.2.1 Excessive flashing	388
11.2.2 Horizontal web cracks	389
11.2.3 Localised head porosity	390
11.2.4 Metal beads and slag (inclusions)	392
11.2.5 Surface porosity and cavities	393
11.2.6 Gross porosity	394
11.2.7 Lack of fusion	395
11.2.8 Hot tear	396
11.2.9 Isolated and multiple inclusions	397
11.2.10 Surface cavities	398
11.2.11 Weld Collar surface distortion and bulges	399

13.6.2 Conventional grinding	443
13.6.3 Switch and crossing grinding	446
13.7 RAIL HEAD TREATMENT BY RAIL MILLING	446
13.7.1 Introduction	446
13.7.2 Milling technology and operation	446
13.7.3 Principle of milling cutting with swarf generated	448
13.7.4 Milling of turnouts	456
13.7.5 Milling rail finish quality	457
13.7.6 Summary rail milling versus grinding	458
13.8 ROTATIONAL PLANING	459
13.8.1 Rotational planing	459
13.9 HIGH SPEED MILLING	460
CHAPTER 14	462
REPAIR BY WELDING	462
14.1 INTRODUCTION	462
14.2 ARC WELDING PROCESSES.	463
14.2.1 Manual metal arc	463
14.2.2 Flux-cored arc welding (FCAW or FCA)	466
14.2.3 Power supply	470
14.2.4 Auxiliary equipment	471
14.2.5 Fully automatic flux cored welding	472

14.3 REPAIR AND MAINTENANCE WELDING PROCEDURES	474
14.3.1 Repair of defects in plain line	474
14.3.2 Repairs to switches	480
14.3.3 Repair of crossings	483
14.3.4 Repair of cast manganese crossings	483
14.3.5 Fabricated crossings	487
14.3.6 Crossing inspection	490
14.4 ARC WELDER TRAINING (PRESCRIBED BY NETWORK RAIL)	490
14.4.1 Training processes	491
14.4.2 Course content	493
14.4.3 Weld inspectors	495
14.4.4 Certification	495
14.5 RAIL REPAIR USING ALUMINOTHERMIC METHODS	496
14.5.1 Background	496
14.5.2 The Thermit head repair process	497
14.5.3 The Railtech head wash process	503
14.5.4 Inspection	506
14.5.5 Welder training	506
CHAPTER 15	507
INNOVATION AND NEW DEVELOPMENTS	507
15.1 RAIL	507

15.1.1 Rail steels	507
15.1.2 Coated rails	508
15.1.3 Rail management processes	509
15.2 WELDING PROCESS DEVELOPMENT	511
15.2.1 Flash butt welding	511
15.2.2 Orbital friction welding	512
15.2.3 Induction welding	514
15.3 ALUMINOTHERMIC PROCESS DEVELOPMENTS	517
15.3.1 Railtech gas box	517
15.3.2 The Thermit® Smartweld control	518
15.3.3 Thermit weld ignition devices	519
15.4 INNOVATION IN ARC WELDING PROCESSES	520
15.4.1 Gas shielded arc weld joining of rails	520
15.4.2 Discrete Defect Repair (DDR)	521
15.4.3 Low preheat head restoration	523
index	525
