

# 1

## ROLLING STOCK

IN THE RAILWAY SYSTEM

### EDITION 2020

---

Edited by  
Éric Fontanel and Reinhard Christeller  
with the support of François Lacôte

## Table of contents

<b>Forewords</b>	13
<b>Chapter 1: Introduction to the railway system</b>	17
Technical progress?	18
1.1 Unique performances: an overview	18
1.2 The bases of the railway system and its positioning in transport systems	20
Progress over time	22
1.3 The fundamental functions of railway technology	24
1.4 History of railways and rolling stock	25
1.4.1 The invention of the unilateral wheel flange and its evolution / other types of guiding	25
1.4.2 Locomotives and traction	27
1.4.2.1 Steam	27
1.4.2.2 The rivals to steam emerge	31
1.4.2.3 The internal combustion engine	32
1.4.2.4 Electric traction	37
1.4.2.5 Energy storage and hybrid traction	43
1.4.2.6 The most powerful locomotives in each category	45
1.4.3 The trains	46
1.4.3.1 Urban transport	46
1.4.3.2 Passenger trains	52
1.4.3.3 Freight trains	60
1.4.4 The main components	61
1.4.4.1 The carriages	61
1.4.4.2 The running gear	63
1.4.5 Other guided transport systems	66
1.4.6 Unsuccessful attempts	67
1.5 The railway systems in Europe and around the world	68
1.5.1 Infrastructure and rolling stock	68
1.5.2 Official bodies	70
1.5.3 The Single European Railway Area (SERA)	71
1.6 Environment, health and safety	77
1.7 Some outstanding persons	81
1.7.1 Richard Trevithick (1771 – 1833)	81
1.7.2 George Stephenson (1781 – 1848) and Robert Stephenson (1803 – 1859)	83
1.7.3 Werner von Siemens (1816 – 1892)	86
1.7.4 George Westinghouse (1846 – 1914)	87
1.7.5 André Chapelon (1892 – 1978)	89
1.8 Evolution of the rolling stock industry	92
1.8.1 The industrial structure	92
1.8.2 From tailor made to "product platforms"	98
1.9 A look into the future	99
<b>Chapter 2: Railway transport systems</b>	103
Introduction	104
2.1 Main actors on the railway transportation market	104
2.1.1 Public authorities	105
2.1.1.1 Public authorities and railway infrastructures	105
2.1.1.2 Public authorities and railway services	105
2.1.1.3 Public authorities and railway networks	106
2.1.2 Economic actors of the railway transport system	107
2.1.2.1 Railway manufacturing industry	108

2.1.2.2	Rail service providers	108
2.1.2.3	Rail service beneficiaries	109
2.1.3	Facilitating actors	109
2.1.3.1	Independent bodies	109
2.1.3.2	Research organisations and academia	110
2.2	Different railway transport systems	111
2.2.1	Generic definitions	111
2.2.2	Railway transportation systems	112
2.2.2.1	Subsystems	112
2.2.2.2	Definitions related to the rolling stock subsystem	114
2.2.2.3	Train formations and elements	115
2.2.3	The railway market segments and corresponding rail systems and services	116
2.2.3.1	First segmentation criteria: networks and regulations	116
2.2.3.2	Systems, services and rolling stock categories	118
2.2.3.2.1	Urban systems	118
2.2.3.2.2	Main line systems and services	119
2.2.3.3	Rail networks in the world, infrastructures, vehicles numbers in service	122
Appendix	European or international associations of railway market stakeholders	125
<b>Chapter 3: Railway system management – Interoperability and safety</b>		<b>129</b>
Introduction		130
3.1	Glossary	130
3.2	A brief outline of the EU and its decision making	135
3.2.1	The Treaty of Lisbon	135
3.2.2	Decision making- the “Co-decision” concept	135
3.2.3	Drafting review and adoption of EU law	135
3.2.4	Subsidiarity	135
3.2.5	Implementation	136
3.2.6	The “Blue Guide” and the “New Approach”	136
3.3	Evolution of the policy objectives for rail	137
3.3.1	Directive 91/440 on the development of the Community's railways	137
3.4.2	Directive 96/48/EC on the interoperability of the high-speed railway System	137
3.3.3	The White Paper of 2001 - European transport policy for 2010 - time to decide	138
3.3.4	The Trans-European Transport Network (TEN-T) - corridors	138
3.3.5	The 1 <sup>st</sup> railway package 2001	139
3.3.6	The 2 <sup>nd</sup> railway package 2004	139
3.3.7	The 3 <sup>rd</sup> railway package 2007	140
3.3.8	The recast of the Interoperability Directive (2008/57/EC)	140
3.3.9	Recast of the 1 <sup>st</sup> railway package 2012 – the Single European Railway Area (SERA)	141
3.3.10	4 <sup>th</sup> railway package 2016	141
3.3.11	European policy concerning Urban Rail	142
3.3.12	Conclusions on the evolution of EU railway policy	144
3.4	European “mainline” rail regulatory domain	145
3.4.1	The Single European Railway Area (SERA) and the Union rail system	145
3.4.2	The Shared Railway System	145
3.4.3	Roles and responsibilities	145
3.4.4	Rules	146
3.4.5	Tools	146
3.4.6	Safety and interoperability directives – how they fit together	147
3.4.6.1	Introduction	147
3.4.6.2	Interoperability and the Interoperability Directive	147
3.4.6.3	The framework for the Union rail system	148
3.4.6.4	Interoperability and safety –integration of risk- and rules-based approaches	148
3.4.6.5	A hierarchy of requirements for regulation and standardisation	149
3.4.6.6	Subsystems	150

3.4.6.7	The Essential Requirements	150
3.4.6.8	TSI scope	151
3.4.6.9	TSI content	151
3.4.6.10	TSI structure	152
3.4.6.11	Drafting TSI's	152
3.4.6.12	TSI conformity	153
3.4.6.13	Basic Parameters and Basic Design Characteristics	153
3.4.6.14	Open Points	154
3.4.6.15	System version management - maintaining compatibility over time	154
3.4.6.16	Non-application of TSIs (formerly known as "derogations")	156
3.4.6.17	The role of national rules in an authorisation	157
3.4.6.18	Mutual recognition of national rules (cross acceptance)	158
3.4.6.19	Innovative Solutions	159
3.4.6.20	Components, Parts, Constituents	160
3.4.6.20.1	Interoperability constituents	160
3.4.6.20.2	Interchangeable spare parts	160
3.4.6.20.3	Safety critical components	163
3.4.6.20.4	Verification of interoperability constituents	161
3.4.7	Railway Vehicle Authorisation	162
3.4.7.1	History	162
3.4.7.2	The current situation	162
3.4.7.3	Overview of the process	162
3.4.7.4	Variants and versions of vehicle type	163
3.4.7.5	Vehicle type authorisations	163
3.4.7.6	The responsibility of the applicant	164
3.4.7.7	Requirements capture	164
3.4.7.8	Area of use	164
3.4.7.9	Route compatibility	166
3.4.7.10	"On the market" and "in service"	166
3.4.7.11	EC Declaration of verification for a subsystem	167
3.4.7.12	Technical file accompanying the 'EC' declaration of verification for a subsystem	168
3.4.7.13	Safe integration and technical compatibility	168
3.4.7.14	Use of an authorised vehicle type	169
3.4.7.15	Stages of the vehicle type authorisation process	170
3.4.7.16	Changes to already authorised vehicle types and authorised vehicles	171
3.4.7.16.1	When is a new authorisation required?	171
3.4.7.16.2	Responsibilities of the vehicle type authorisation holder	172
3.4.7.16.3	Configuration Management	172
3.4.7.17	Suspension, revocation or amendment of an issued authorisation	173
3.4.8	Regulation of railway safety in the European Union rail system - the Safety Directive	174
3.4.8.1	History	174
3.4.8.2	Scope of the Safety Directive	175
3.4.8.3	Objectives of the Safety Directive	175
3.4.8.4	The safety objective	175
3.4.8.5	Roles and responsibilities	175
3.4.8.6	Safety Management Systems, Single Safety Certificates and Authorisations	177
3.4.8.7	National rules	177
3.4.8.8	Dangerous goods	178
3.4.8.9	Common Safety Indicators, Targets and Methods	178
3.4.8.9.1	Common Safety Methods (CSMs)	178
3.4.8.9.2	The CSM on safety management system requirements	179
3.4.8.9.3	The CSM for monitoring	179
3.4.8.9.4	The CSMs for conformity assessment	179
3.4.8.9.5	The CSM on supervision	179
3.4.8.9.6	The CSM on Common Safety Targets	180

## Rolling Stock in the Railway System

3.4.8.9.7	The CSM on risk evaluation and assessment	180
3.4.8.9.8	CSMs scope	180
3.4.8.10	Maintenance - the Entity in Charge of Maintenance (ECM)	181
3.4.8.10.1	Responsibilities for maintenance	181
3.4.8.10.2	The requirements on an Entity in Charge of Maintenance	181
3.4.8.10.3	Requirements for the maintenance function- Maintenance Workshop	182
3.5	Urban rail domain	184
3.5.1	The Urban Rail Platform (URP)	184
3.5.2	Procedures for Acceptation, Authorisations, Certification (AAC) for urban rail domain	184
3.5.2.1	Safety related regulations for urban rail in Europe	184
3.5.2.2	Typical case studies (AAC procedure examples in France, Germany and UK)	188
3.5.2.2.1	French case study	188
3.5.2.2.2	German case study	189
3.5.2.2.3	London Underground case study	191
3.5.2.3	Generic AAC recommendations for putting urban rail systems into service	192
3.5.2.3.1	Overall framework	192
3.5.2.3.2	Proposal for a core process	195
3.5.2.3.3	Adapting the core AAC process	196
3.6	Other European directives and regulations	199
3.6.1	Directives and regulations concerning the protection of environment	199
3.6.1.1	The EMC Directive	199
3.6.1.2	The Non-Road Mobile Machinery regulation (NRMM)	199
3.6.1.3	The directive on the Restriction of use of Hazardous Substances (RoHS)	200
3.6.1.4	The Waste Electrical and Electronic Equipment Directive (EEE)	200
3.6.1.5	The REACH Regulation	200
	Environmental aspects in the rolling stock design: key points in accurate eco-design approach	
3.6.2	The Machinery Directive	203
3.6.3	Other regulatory systems applicable to the European rolling stock	203
3.6.3.1	Specific case of the Baltic States and Finland	203
3.6.3.2	OTIF - Unified railway law to connect Europe, Asia and Africa	204
3.6.4	Other global systems	205
3.6.4.1	The extended European zone	205
3.6.4.2	The former Soviet Union - OSJD	205
3.6.4.3	The United Nations (UNICE)	205
3.6.4.4	North America (USA, Canada, Mexico)	205
3.6.4.5	Japan	206
3.6.4.6	Other major countries of the railway world	207
3.6.5	The European Railway Agency, de-facto "system authority" for the Union rail system	207
3.6.5.1	The role and organisation of the Agency	207
3.6.5.2	The supporting organisations	208
3.6.5.3	Reports	209
3.6.5.4	Registers	209
3.6.5.5	(Formal) opinions	210
3.6.6	EU railway research	210
3.6.7	Railway standards	211
3.6.7.1	The "new approach"	212
3.6.7.2	Special case of the railway sector	212
3.6.7.3	Use of standards in the framework of contracts	213
3.6.7.4	Development of railway standards	213
3.6.7.5	Some significant standards	214
3.6.7.6	European Standardisation and global standardisation	215
3.6.7.7	UIC leaflets	216
Appendix 3.1	The Technical Specifications for Interoperability – rolling stock as described by the TSI's.	217
	Introduction	217
	I.1 TSIs applicable to rolling stock	217

I.1.1	Locomotives and Passenger Vehicles: LOC & PAS TSI	217
I.1.2	Freight wagons - WAG TSI	219
I.1.4	Access to people with reduced mobility: PRM TSI	220
I.1.5	Noise emitted by rolling stock: the Noise (NOI) TSI	221
I.2	Other structural systems as described by TSIs – interfaces with rolling stock	222
I.2.1	INFRA TSI and interfaces between rolling stock and infrastructure	222
I.2.2	ENE TSI and interfaces between rolling stock and electrical power systems	227
I.2.3	CCS TSI and interfaces between rolling stock and control-command	230
Appendix 3.II	The Common Safety Method on Risk Evaluation and Assessment (CSMREA)	235
II.1	Principles	235
II.2	The risk-based approach to safety	235
II.3	Adapted and pragmatic risk acceptance criteria	236
II.4	Assurance of an overall management of safety requirements	237
II.5	When shall the CSMRA be used?	237
II.6	Responsibility	238
II.7	Basic Elements of the CSMREA Process	238
II.8	The Independent Assessment Body (AsBo)	241
II.9	Design Targets	243
II.10	The re-use of results	243
II.11	The CSMRA and the safety assurance standard EN 50126	243
Appendix 3.III	EN 50126, the safety assurance standard in the railway domain	244
III.1	The railway system as a complex object with a high level of safety	244
III.2	Objectives of the EN 50126	248
III.3	Main principles defined in the EN 50126	248
III.4	Application of the EN 50126 to the rolling-stock	251
III.5	The Preliminary Risk Analysis (PRA)	253
III.6	The Interface Hazard Analysis (IHA)	254
III.7	Controlling the Hazards and safety requirements demonstration: The Hazard Log/Record (HZL)	255
III.8	The Detailed Risk Analysis (DRA)- top down (deductive) and bottom-up (inductive)	256
III.9	The Safety Test & Commissioning Plan (STCP)	257
III.10	Independent Safety Assessment and Certification	257
III.11	Relationship of the EN 50126 with other international standards	257
<b>Chapter 4:</b>	<b>Basic interfaces with the railway system</b>	<b>259</b>
Introduction		260
4.1	Railway gauges	260
4.1.1	The track gauge	260
4.1.2	Infrastructure and rolling stock sizing	262
4.1.2.1	The fundamental objective of gauging: rail traffic safety	262
4.1.2.2	The reference contours	262
4.1.2.3	The different types of gauge	264
4.1.3	Other gauges outside Europe	273
4.1.3.1	Russia and Eastern European countries	273
4.1.3.2	North American Continent	273
4.1.3.3	Japan	274
4.1.4	A gauge calculation example	275
4.1.4.1	It is mandatory to know the defined reference profiles to be taken as a basis	275
4.1.4.2	It is mandatory to know the basic parameters of the reference profiles	276
4.1.4.3	It is necessary to define the main vehicle parameters	278
4.1.4.4	Now we can define the maximum construction gauge of the vehicle	280
4.2	The wheel-rail interface	283
4.2.1	Introduction to the wheel-rail Interface	283
4.2.2	Wheel and rail profiles and guidance on switches and crossings	284
4.2.2.1	Wheel profiles - description and definitions	285
4.2.2.2	Rail profiles and rail inclination	288

4.2.2.3	Guidance in switches and crossings	289
4.2.3	Wheel-rail contact geometry and ride on straight track	290
4.2.3.1	Guiding principle - sinusoidal motion and steering capability	290
4.2.3.2	Equivalent conicity, contact geometry and lateral stability	291
4.2.3.2.1	Equivalent conicity definition	291
4.2.3.2.2	Contact geometry and equivalent conicity analysis	292
4.2.3.2.3	Lateral stability	295
4.2.3.2.4	Multi body systems and vehicle/track system optimisation	298
4.2.4	Wheel-rail contact theory - creepage and creep forces	298
4.2.4.1	Contact patch and creepage	299
4.2.4.2	Creepage and creep forces	301
4.2.4.3	Adhesion and creep/slip force function during traction and braking	301
4.2.5	Curve negotiation and flange climbing derailment	303
4.2.5.1	Curve negotiation and nomenclature of forces on wheel and rail	303
4.2.5.2	Flange climbing derailment	305
4.2.6	Track geometry, vehicle/track loads and wheel and track damage	306
4.2.6.1	Track geometry and operating conditions impacting wheel-rail loads	306
4.2.6.2	Vehicle and track damage inter-dependence	309
4.2.6.3	Wheel and rail wear patterns and analysis	311
4.2.6.4	Rolling surface damage and rolling contact fatigue	313
4.2.7	Wheel-rail friction management	317
4.3	Railway vehicle dynamics simulations	317
4.3.1	The aim of railway vehicle dynamics simulations	317
4.3.2	Computer tools and models used in railway vehicle dynamics	317
4.3.2.1	Simulation software packages	317
4.3.2.2	Simulation model	319
4.3.2.2.1	Vehicle model	319
4.3.2.2.2	Track model	320
4.3.2.2.3	Modelling the contact between wheel and rail	320
4.3.2.3	Solution methods	323
4.3.3	Simulations of vehicle dynamics in rolling stock development	323
4.3.3.1	Introduction	323
4.3.3.2	Eigenbehaviour	324
4.3.3.3	Stability assessment	325
4.3.3.4	Curving behaviour	327
4.3.3.5	Ride characteristics and comfort	328
4.3.3.6	Cross wind	328
4.3.4	Simulations in vehicle acceptance process	329
4.4	Aerodynamics	330
4.4.1	Introduction	331
4.4.2	Elements of physics for train aerodynamics	332
4.4.2.1	Characteristic parameters	332
4.4.2.2	Simulation methods overview	332
4.4.2.3	Experimental methods overview	334
4.4.3	Aerodynamic requirements	335
4.4.3.1	National rules for aerodynamics	335
4.4.3.2	Technical Specification for interoperability	335
4.4.3.3	Conclusion on regulatory requirements	337
4.4.3.4	Customer requirements	337
4.4.4	Aerodynamic Resistance	338
4.4.4.1	Requirements	338
4.4.4.2	Prediction Methods	339
4.4.4.3	Design parameters	339
4.4.5	Head pressure pulse	341
4.4.5.1	Requirements	341

4.4.5.2	Benefits and drawbacks	342
4.4.5.3	Prediction methods	342
4.4.5.4	Design parameters	343
4.4.6	Slipstreams	344
4.4.6.1	TSI requirements	345
4.4.6.2	Benefits and drawbacks	346
4.4.6.3	Prediction methods	346
4.4.6.4	Design parameters	347
4.4.7	Tunnel induced pressure changes	347
	Tunnel pressure	347
	Pressure in passenger areas	348
4.4.7.1	Requirements	348
4.4.7.1.1	Pressure change requirements inside tunnels	348
4.4.7.1.2	Pressure change requirements inside the passengers area	349
4.4.7.2	Benefits and drawbacks	350
4.4.7.2.1	Tunnel pressure	350
4.4.7.2.2	Passenger area pressure	350
4.4.7.3	Prediction methods	350
4.4.7.4	Design parameters	350
4.4.7.4.1	Tunnel pressure	350
4.4.7.4.2	Passengers area pressure	350
	Example	351
4.4.8	Cross-wind stability	352
4.4.8.1	Requirements	352
4.4.8.2	Benefits and drawbacks	353
4.4.8.3	Prediction methods	353
4.4.8.4	Design parameters	354
<b>Chapter 5: Maintenance and mastery of the life cycle</b>		<b>357</b>
5.1	Introduction: Lifecycle Cost - model and reality	358
5.1.1	An approach to lifecycle	358
5.1.2	LCC, income and TVO	359
5.1.3	Prediction is a difficult art	359
5.2	Maintenance of railway rolling stock over time	360
5.2.1	At the beginning, maintenance was only a technical act	360
5.2.2	Then, maintenance became a central part of the economic model	361
5.2.3	New stakeholders, new responsibilities	361
5.2.4	Consequences for stakeholders: each has its own logic	362
5.2.4.1	For the owners of the rolling stock	362
5.2.4.2	For the operators	363
5.2.5	Necessity for a new legal and regulatory context	364
5.2.5.1	Design	364
5.2.5.2	Maintenance	365
5.2.5.3	Evolutions	365
5.3	Identification of the objectives pursued in maintenance	366
5.3.1	A need closely related to operating conditions and to pursued objectives	366
5.3.2	Two fundamental objectives to attain	367
5.4	Controlling reliability and maintainability	368
5.4.1	Summary of the basic notions of reliability	368
5.4.1.1	Three periods	368
5.4.1.2	Deduced objectives	369
5.4.2	Control of reliability as of the design phases	369
5.4.3	Control of maintainability during the design phases	370
5.5	Maintenance engineering and types of maintenance	371
5.5.1	Corrective maintenance	372

## Rolling Stock in the Railway System

5.5.2	Preventive Maintenance	372
5.5.2.1	Predetermined preventive maintenance	372
5.5.2.2	Conditional (non predictive) preventive maintenance	373
5.5.2.3	Predictive condition based maintenance (CBM)	375
5.5.2.4	Perspectives	377
5.5.3	Support process	378
5.5.3.1	Optimisation of planning	378
5.5.3.2	Digital continuity over the entire life of the train	378
5.5.3.3	Additive manufacturing	379
5.5.3.4	The return of experience	379
5.5.4	Limits: mastery of LCC or overall progress?	379
5.5.4.1	Proper use of progress	379
5.5.4.2	Master growth in demand and in complexity	380
5.6	Operations and Maintenance: a necessary complementarity	381
5.6.1	Operating fleet and fleet in maintenance	381
5.6.2	Reducing the need for maintenance	382
5.6.3	Insert maintenance into the unused periods	382
5.6.3.1	Understanding the need and specifying a discreet maintenance	382
5.6.3.2	A way: shared maintenance	384
5.6.3.3	"Agile" maintenance	384
5.6.4	Decreasing the time of passage through the maintenance centre	385
5.6.4.1	Actual intervention times	385
5.6.4.2	Logistical times and queues	385
5.6.5	Maintainer - operator cooperation	386
5.6.5.1	Designing train diagrams taking account maintenance sites constraints	386
5.6.5.2	Virtuous contracting	388
5.6.6	Reducing the impact of unexpected events	388
5.7	A methodology to define and manage the support system - Integrated Logistic Support (ILS)	389
5.7.1	The support system	389
5.7.2	General principles for integrated logistics support	390
5.7.2.1	Origin	390
5.7.2.2	Objective	390
5.7.3	Process components	391
5.7.3.1	Logistics Support Analysis	391
	Maintenance levels	393
5.7.3.2	The management of data and the LSAR	394
5.7.4	Application in the design and acquisition phase	395
5.7.4.1	LSA	395
5.7.4.2	Choice of rolling stock and equipment	395
5.7.4.3	Choice of an associated support system	396
5.7.4.4	Control of the commissioning risks	396
5.7.5	Application in the operational phase (or for an existing rolling stock)	397
5.7.5.1	Challenges, objectives and processes	397
5.7.5.2	Measurement, analysis and indicators	398
5.7.5.3	Essential rationalisation elements for in-service maintenance	399
5.7.5.4	Return of experience and maintenance scheme	400
5.7.5.5	ILS and purchasing	402
5.8	Revision, regeneration and evolutions	402
5.8.1	Revision	402
5.8.2	Modifications and evolutions	403
5.8.2.1	Exogenous motivation: adaptation to the technical and legal environment	403
5.8.2.2	Endogenous motivation	403
5.8.3	Necessity for configuration management	404
5.8.3.1	Objectives of configuration management	404
5.8.3.2	System of configuration management	405
