

3

ROLLING STOCK

IN THE RAILWAY SYSTEM

EDITION 2020

Edited by
Éric Fontanel and Reinhard Christeller
with the support of François Lacôte

Table of contents

Forewords	15
Chapter 8: Traction	19
8.1 Electric traction and auxiliary circuits	20
8.1.1 Introduction: electric traction function	20
8.1.1.1 Traction or propulsion?	20
8.1.1.2 The basic functions of the traction system	20
8.1.1.3 Function: provide electrical energy	20
8.1.1.4 Function: accelerate, maintain speed, brake and stop	20
8.1.1.5 Specific properties of electric traction	21
8.1.2 Objectives, services, constraints and interfaces of the electric traction system	22
8.1.2.1 Performances of the traction system	22
8.1.2.2 The constraints of the traction system	24
8.1.2.2.1 Constraints imposed by the customer	24
8.1.2.2.2 Constraints linked to the line supply and the railway signalling system	25
8.1.2.2.3 Constraints in relation to standards	25
8.1.2.2.4 Constraints linked to the traction system integration within rolling stock	26
8.1.2.3 Electric traction sub-system interfaces	27
8.1.2.3.1 Electrical interfaces	27
8.1.2.3.2 Mechanical interfaces	27
8.1.2.3.3 Interface with the control command system (signalling)	28
8.1.2.3.4 Interface with the energy sub-system	28
8.1.2.3.5 Interfaces with air and hydraulic circuits	28
8.1.2.3.6 Interface with compressed air production	28
8.1.2.3.7 Interface with environment	28
A critical interface problem: electro-magnetic compatibility	28
8.1.3 The wheel-rail contact- adhesion management	31
8.1.3.1 Structure	31
8.1.3.2 Wheel-rail contact – pseudo-slip and macro-slip	31
8.1.3.3 Wheel-rail adhesion	33
8.1.3.4 Anti-slip and anti-slide functions	35
8.1.3.4.1 Anti-slip function	35
8.1.3.4.2 Anti-slide function or wheel slide protection device (WSP)	37
Some typical behaviours of anti-slip and wheel slide protection device	38
8.1.4 Train movement dynamics	39
8.1.4.1 Train dynamics on route profile	39
8.1.4.2 Fundamental formula of railway dynamics	39
8.1.4.2.1 Resistance to motion RTM	40
8.1.4.2.2 Davis formula	42
8.1.4.2.3 Remark on the static mass variation	42
8.1.4.2.4 Breakaway force at starting	43
8.1.4.2.5 Force due the gravity F_G	43
8.1.4.2.6 Resistive force due to the curves F_C	44
8.1.4.2.7 Accelerating or decelerating effort F_a	45
8.1.5 The effort-speed curves $F(V)$	46
8.1.5.1 Effort and power	46
8.1.5.2 Variations and limitations of the Effort-Speed curves $F(V)$	46
8.1.5.3 Simulations of the train dynamics	47
8.1.5.3.1 Input data relative to the line profile – type of route	47
8.1.5.3.2 Input data relative to the rolling stock	47
8.1.5.3.3 Input data relative to the operation mode	47
8.1.5.3.4 Output data of the route simulations	48
8.1.5.4 Traction system architecture – motor distribution and motorisation ratio	49
8.1.6 Functional and organic decomposition of the traction and braking sub-system	51
8.1.6.1 The five fundamental functions	51
8.1.6.2 Traction drive under single-phase voltage (AC)	51
8.1.6.3 Traction drive under continuous voltage (DC)	52
8.1.6.4 Traction drive multi-voltage AC-DC	53
8.1.7 The components of the electric traction sub-system	54
8.1.7.1 Traction motors	54

8.1.7.1.1	The different types of traction motors	54
8.1.7.1.2	Torque generation in electric motors	56
8.1.7.1.3	Regimes of operation of electric traction motors	58
8.1.7.1.4	Cooling of traction motors	58
8.1.7.1.5	The continuous regime: class of insulation (temperature rise)	59
8.1.7.1.6	The fundamental parameters of a traction motor	60
8.1.7.1.7	Asynchronous motor with rotor cage or induction motor	60
8.1.7.1.8	Permanent magnet synchronous motor (PMSM)	68
8.1.7.1.9	The autopiloted synchronous motor with wound rotor (WRSM)	74
8.1.7.2	Electronic converters at motor side	76
8.1.7.2.1	Recall on power electronics	76
8.1.7.2.2	Pulse width modulation technique (PWM)	76
8.1.7.2.3	Two level three-phase inverter	77
8.1.7.2.4	The different PWM modes	79
8.1.7.2.5	Three-level inverter	85
8.1.7.2.6	Forced commutated current inverter	86
8.1.7.2.7	Current inverter with natural or assisted commutation	88
8.1.7.3	Input converters under DC supply lines	91
8.1.7.3.1	The choppers	91
8.1.7.3.2	The step-down chopper	91
8.1.7.3.3	The step-up chopper	92
8.1.7.3.4	Bidirectional chopper	92
8.1.7.3.5	Braking chopper	93
8.1.7.3.6	Association of elementary bidirectional choppers	93
8.1.7.4	The DC input filter	94
8.1.7.4.1	DC input filter functions	94
8.1.7.4.2	DC input filter structures	94
8.1.7.4.3	Choice of the resonance frequency of input filter	95
8.1.7.4.4	Input impedance of the whole train	95
8.1.7.4.5	Example of input filter with multiple resonances and anti-resonances	96
8.1.7.5	Input converters under AC supply line	96
8.1.7.5.1	Forced commutated single-phase rectifiers	96
8.1.7.5.2	Single-phase rectifiers with "natural" commutation	106
8.1.7.6	The traction transformer	109
8.1.7.6.1	Traction transformer functions	109
8.1.7.6.2	Specificities of traction transformers	109
8.1.7.6.3	Principle of operation	110
8.1.7.6.4	Transformer dimensioning parameters	114
8.1.7.6.5	Winding utilisation with AC supply	114
8.1.7.6.6	Winding for anti-harmonic filter	115
8.1.7.6.7	Traction windings as input filter inductances with DC supply	116
8.1.7.6.8	Class of temperature – transformer cooling	117
8.1.7.6.9	Traction transformer core construction	118
8.1.7.6.10	Installation and components of the transformer-inductor set	120
8.1.7.6.11	Transformers of the future – "e-transformers"	122
8.1.7.7	Current collection devices – pantographs and shoes	122
8.1.7.7.1	Collection general principle	128
8.1.7.7.2	Collection by contact rail- shoes	138
8.1.7.8	Power diagram configuration of multi-voltage systems	140
8.1.7.8.1	Line voltage detection device	141
8.1.7.8.2	AC configuration	142
8.1.7.8.3	DC configuration	143
8.1.7.9	Traction current return	144
8.1.7.9.1	Current return insulated from the carbody	144
8.1.7.9.2	Current return via carbody structure	144
8.1.7.9.3	Traction current return devices	145
8.1.7.10	Mechanical drives	146
8.1.7.10.1	Nose-suspended motor – Cannon box drive	147
8.1.7.10.2	Hollow pinion drive – Motor partly suspended	148
8.1.7.10.3	Quill drive – Motor fully suspended	149
8.1.7.10.4	TGV drives by cardan joint and sliding shaft "tripode"	149
8.1.7.10.5	Drive by tooth coupling – Motor partly suspended	150
8.1.7.10.6	Drives for trams	151
8.1.7.10.7	Drives for metros and light vehicles with rubber tyres	152

8.1.7.11	Protection components - circuit breakers	153
8.1.7.11.1	Protection against short-circuits	153
8.1.7.11.2	Closing and auto-reclosing of circuit breakers	154
8.1.7.11.3	Single-phase circuit breaker	154
8.1.7.11.4	Direct current circuit breakers	156
8.1.7.11.5	Protection against over-voltages – surge arrester and spark gap	160
8.1.8	Dynamic braking	163
8.1.8.1	The different modes of braking	163
8.1.8.2	Dynamic braking definition	163
8.1.8.3	Braking build-up – motor excitation	163
8.1.8.4	Auxiliary supply in autonomous braking without line voltage	166
8.1.8.5	Braking effort-speed curves	166
8.1.8.6	Regenerative braking and resistance braking	168
8.1.8.7	Weakly receptive line- transition to resistance braking	169
8.1.8.8	Blending of dynamic brake and friction brake	170
8.1.8.9	Braking chopper and resistors	170
8.1.8.10	Braking resistors	171
8.1.8.11	Voltage limiter operation	172
8.1.9	Supply of auxiliary functions	173
8.1.9.1	Technical auxiliaries	173
8.1.9.2	Comfort auxiliaries	174
8.1.9.3	Calculation of active and reactive powers of auxiliary loads	175
8.1.9.4	Voltage quality of the three-phase train line according to EN 50533	175
8.1.9.5	The three classes of voltage quality of EN 50533	177
8.1.9.6	Power supply for auxiliary converters	179
8.1.9.6.1	Passenger trains hauled by locomotive	179
8.1.9.6.2	Train powered only under single-phase voltages	179
8.1.9.6.3	Trains powered with AC and DC voltages	179
8.1.9.6.4	Train powered only under DC voltages	180
8.1.9.7	Structure of auxiliary converters	180
8.1.9.7.1	Direct inverters	180
8.1.9.7.2	Chopper-inverter diagram	181
8.1.9.7.3	4Q converter-inverter diagram	182
8.1.9.7.4	Chopper booster-DC/DC inverter	182
8.1.9.7.5	General architectures of trainset auxiliaries	182
8.1.10	Power semiconductors in electric traction	184
8.1.10.1	The IGBT transistor (Insulated Gate Bipolar Transistor)	184
8.1.10.1.1	Principle and technology	184
8.1.10.1.2	Internal structure of an IGBT module	185
8.1.10.1.3	Range of IGBTs in electric traction	186
8.1.10.1.4	IGBT implementation – electric and thermal constraints	187
8.1.10.2	Cooling of semiconductors	193
8.1.10.2.1	Heatsink	193
8.1.10.2.2	Heatpipes	194
8.1.10.2.3	Water plate	194
8.1.10.2.4	Thermal model of IGBT module and cooler	196
8.1.10.2.5	Performance summary of coolers for IGBT modules	198
8.1.10.2.6	Immersion cooling	198
8.1.10.3	Concept of power modules – standardisation and modularity	201
8.1.10.4	Reliability of power modules	203
8.1.11	Dual-mode traction and hybrid traction- energy storage	205
8.1.11.1	Dual-mode traction	205
8.1.11.2	Source of energy: diesel power-pack	206
8.1.11.3	Regulation of thermal and electric powers	207
8.1.11.4	All electric dual-mode equipment	207
8.1.11.5	Hybrid traction	208
8.1.11.5.1	Contribution of hybridization in electric traction	209
8.1.11.5.2	Contribution of hybridisation to a thermal traction drive	210
8.1.11.6	Energy storage on board	211
8.1.11.6.1	Modes of energy storage	211
8.1.11.6.2	Essential parameters of energy storage components	212
8.1.11.6.3	Batteries	213
8.1.11.6.4	Flywheels	214
8.1.11.6.5	Supercapacitors	215

8.1.12 Innovative power supply technologies for traction systems in public transport	218
8.1.12.1 Objectives	218
8.1.12.2 Technologies	218
8.1.12.3 Continuous power supply from the ground without overhead contact line	219
8.1.12.4 Road surface contact rail power supply	220
8.1.12.4.1 APS	220
8.1.12.4.2 TramWave	221
8.1.12.5 Feeding by frequent recharges in the station	222
8.1.12.5.1 Physical contact	222
8.1.12.5.2 Magnetic induction	223
8.1.12.6 Dual-mode solutions	223
8.1.12.7 Energy recuperation and management	224
8.1.13 Hydrogen fuel cells – zero emission passenger trains?	224
8.1.13.1 Principle of a PEM fuel cell	225
8.1.13.2 Hydrogen storage	227
8.1.13.3 Hydrogen production	228
8.1.13.4 Hydrogen risk management	228
8.1.13.5 Comparison hydrogen system with other electric supply systems	229
8.1.11.7 Hydrogen energy efficiency	230
8.1.13.6 Fuel cell-powered electric vehicle realisations	231
8.1.13.7 Conclusion on hydrogen fuel cells	232
8.1.14 Electric traction in the future	232
8.1.14.1 Foreword	232
8.1.14.2 What are the expectations of operators and users?	233
8.1.14.3 The directions of innovation	233
8.1.14.3.1 Silicon carbide semiconductors (SiC)	234
8.1.14.3.2 Rise in rotational speed of the traction motors	234
8.1.14.3.3 Medium frequency traction transformers	234
8.1.14.3.4 Mass-volume reduction of passive components	235
8.1.14.3.5 Energy storage devices - rise of energy density	235
8.1.14.3.6 "Connected" traction equipment - more communication	235
8.1.14.3.7 Sophisticated electronic controls - More intelligence	235
8.1.14.4 Conclusion	235
8.2 Thermal traction	236
8.2.1 General introduction to thermal traction	236
8.2.2 Diesel engines	238
8.2.2.1 General principles	238
8.2.2.2 General description	239
8.2.2.3 General classification of engines	242
8.2.2.3.1 Two-stroke and four-stroke engines	242
8.2.2.3.1.1 Running principles of a four-stroke engine	242
8.2.2.3.1.2 Running principles of a two-stroke engine	242
8.2.2.3.2 Medium speed and high speed engines	244
8.2.2.3.3 Rail, marine, industrial and road engines	244
8.2.2.3.3.1 DMU case	245
8.2.2.3.3.2 Locomotives case	245
8.2.2.4 Available power	246
8.2.2.5 Volume, mass and integration	248
8.2.2.5.1 Integration in locomotives	248
8.2.2.5.2 Integration in railcars & DMU's	249
8.2.2.5.2.1 Integration in the car-body	249
8.2.2.5.2.2 Under-floor installation	250
8.2.2.5.2.3 On-roof Installation	250
8.2.2.6 Fuel systems	250
8.2.2.6.1 Diesel engine fuel injection systems	251
8.2.2.6.1.1 In-line-injection pump	251
8.2.2.6.1.2 Pump-line-nozzle injection	251
8.2.2.6.1.3 Injector-pump unit	251
8.2.2.6.1.4 Common rail injection	252
8.2.2.6.2 Fuel oil production process	252
8.2.2.6.3 Diesel fuel standard for railways	253
8.2.2.6.4 Diesel fuel filtration	253
8.2.2.7 Combustion air	254
8.2.2.7.1 Air filtration	254

8.2.2.7.2 Turbocharger	254
8.2.2.8 Exhaust gas	255
8.2.2.8.1 Exhaust gas circuit	255
8.2.2.8.2 Silencer	255
8.2.2.8.3 The issue of polluting emissions	256
8.2.2.8.1.1 Emissions components	256
8.2.2.8.1.2 Regulatory limitations to pollutant emissions	256
8.2.2.8.1.3 Emissions reduction technologies	258
8.2.2.8.1.4 Consequences for railways	263
Impact of Non Road Mobile Machinery regulation on emissions.	264
8.2.2.9 Cooling system	269
8.2.2.9.1 Cooling circuits	269
8.2.2.9.2 Cooling unit of the "cooling tower" type	270
8.2.2.9.3 Roof-mounted cooling unit	270
8.2.2.9.4 Cooling liquid and treatment	271
8.2.2.10 Lubrication system	271
8.2.2.10.1 Lubrication oil transit	271
8.2.2.10.2 Filtration of the lubrication oil	272
8.2.2.10.3 Type of lubrication oil	273
8.2.2.11 Engine starting systems	274
8.2.2.11.1 Electric starter	274
8.2.2.11.2 Pneumatic starter	274
8.2.2.11.3 Alternator	275
8.2.2.12 Engine pre- & post-lubrication systems	275
8.2.2.13 Engine pre-heating systems	275
8.2.2.13.1 Burner heaters	276
8.2.2.13.2 Electric heaters	276
8.2.2.14 Maintenance and life cycle cost	276
8.2.2.14.1 Maintenance	276
8.2.2.14.2 Operations costs and life cycle cost	277
8.2.3 Transmission systems	278
8.2.3.1 Introduction	278
8.2.3.2 Hydro-mechanical transmissions	278
8.2.3.3 Hydraulic transmissions	279
8.2.3.4 Electrical transmissions	279
8.2.3.4.1 Synchronous alternator	280
8.2.3.4.1.1 Operating principle	280
8.2.3.4.1.2 Different designs	280
8.2.3.4.1.3 Synchronous alternator railway generator set	282
8.2.3.4.2 Asynchronous alternator	282
8.2.3.4.2.1 Design and running principle	282
8.2.3.4.2.2 Railways asynchronous gen-set	284
8.2.3.5 Power regulation	285
8.2.3.5.1 Diesel traction power regulation	285
8.2.3.5.2 Diesel engine regulation	285
8.2.4 Gas turbines	286
8.2.4.1 Running principle	286
8.2.4.2 Gas turbines in railways	287
8.2.5 Gas engines	288
8.2.5.1 General principles of a gas engine	289
8.2.5.2 Gas injection systems	289
8.2.5.2.1 System with air-gas mixer and throttle valves	289
8.2.5.2.2 System with gas inlet valves and pre-chamber	290
Chapter 9: Train control and monitoring system (TCMS)	293
9.1 Introduction	294
9.2 The specific constraints associated to railways	294
9.3 General architecture of the train control and monitoring system	296
9.4 The specification of the train control and monitoring system	297
9.4.1 The functions	297
9.4.2 The origin and identification of functional requirements	298
9.4.3 The train status	298
9.4.4 How to specify the on-board train control and monitoring system	299

9.4.4.1	Text description	299
9.4.4.2	State diagram and state table	299
9.4.4.3	Flow chart	300
9.4.4.4	Truth table	300
9.4.4.5	Logical blocks	301
9.4.4.6	Block diagrams "SADT"	301
9.4.5	The safety functions	301
9.4.5.1	Risk acceptability	302
9.4.5.2	The safety integrity	303
9.4.6	Cyber-security	304
9.5	The implementation of the train control and monitoring system	305
9.5.1	Power supply of train control and monitoring system	305
9.5.2	The rolling stock electrical signals	305
9.5.2.1	The digital signals	306
9.5.2.2	The current loops	307
9.5.2.3	Square or rectangular signals	307
9.5.3	The technologies for the train control and monitoring system implementation	308
9.5.3.1	The hardwired logic	309
9.5.3.2	Non-programmable electronics	310
9.5.3.3	The programmable logic networks	310
9.5.3.4	Use of microprocessors	310
9.5.4	The EMC (Electromagnetic compatibility)	310
9.5.5	On-board train computer networks	311
9.5.5.1	The different types of networks	311
9.5.5.2	The different types of on-board devices	313
9.5.5.3	The MVB network	314
9.5.5.3.1	The ESD and EMD media	314
9.5.5.3.2	The OGF media	317
9.5.5.4	The WTB network	318
9.5.5.5	The ECN network	319
9.5.5.6	The ETB network	320
9.5.5.7	The CAN network	322
9.5.5.8	Examples of embedded network architectures	322
9.5.5.8.1	Example of an architecture making use of OGF and ESD media	323
9.5.5.8.2	Example of an architecture making use of MVB and WTB networks	323
9.5.5.8.3	Example of an architecture making use of MVB, ECN and ETB networks	324
9.5.6	Electrical and wiring diagrams for rolling stock	324
9.5.6.1	Principles and standards	324
9.5.6.2	The functional circuit diagrams	325
9.5.6.3	The wiring circuit diagram	325
9.5.6.4	Representation of the rolling stock electrical circuits in a table	326
9.5.7	Functional description	327
9.6	Validation and maintenance of the train control and monitoring system	327
9.6.1	System validation	327
9.6.2	Simulations	328
9.6.3	Functional tests	328
9.6.4	Obsolescence of components	328
9.6.5	The configuration management	329

Chapter 10: Braking systems and compressed air production 331

10.1	The braking system	332
10.1.1	Introduction	332
10.1.2	General architecture of a railway braking system	332
10.1.2.1	Requirements	332
10.1.2.2	Interfaces	333
10.1.2.3	Services provided and constraints	333
10.1.2.4	General architecture of a braking system	335
10.1.2.5	Braking modes: definitions	335
10.1.2.5.1	Service braking	336
10.1.2.5.2	Emergency braking	336
10.1.2.5.3	Safety braking	336
10.1.2.5.4	Stationary braking	336

10.1.3	The Golden Rules	336
10.1.3.1	Automatic brake application	336
10.1.3.2	Continuity	337
10.1.3.3	Inexhaustibility	337
10.1.3.4	Graduability	337
10.1.3.5	Quietness	338
10.1.3.6	Testability	338
10.1.4	Standards and regulations	338
10.1.4.1	The standards	338
10.1.4.2	Regulations	340
10.1.4.3	Regulatory procedure for rolling stock acceptance	340
10.1.4.3.1	Railways subject to European interoperability regulation	340
10.1.4.3.2	The wheel slide protection case	341
10.1.4.3.3	Urban and other networks not subject to interoperability regulation	341
10.1.5	Braking performance and signalling	342
10.1.5.1	Braking and signalling	342
10.1.5.2	Traditional signalling	342
10.1.5.3	Modern control-command systems	343
10.1.5.3.1	The requirements	343
10.1.5.3.2	Guaranteed braking performance	344
10.1.6	The three main families of braking systems	345
10.1.7	The compressed-air pneumatic air brake	345
10.1.7.1	Introduction	345
10.1.7.1.1	Historical references	345
10.1.7.1.2	Operating principles	346
10.1.7.2	Synoptic diagram	346
10.1.7.3	Technical description	347
10.1.7.3.1	Introduction	347
10.1.7.3.2	The distributor valve	347
10.1.7.3.2.1	Genesis	347
10.1.7.3.2.2	Operating principles	348
10.1.7.3.2.3	Complementary functionalities	351
10.1.7.3.2.4	Some standardised values	352
10.1.7.3.2.5	The main distributor valves	353
10.1.7.3.2.6	Particular case of the JMR distributor valve	353
10.1.7.3.2.7	Particular case of the motor vehicles	353
10.1.7.3.2.8	About the AAR distributor valve	354
10.1.7.3.3	Other main components of the compressed air pneumatic brake	355
10.1.7.3.3.1	The relay valve	355
10.1.7.3.3.2	On / off magnet valve	356
10.1.7.3.3.3	Electro-pneumatic transducers	357
10.1.7.3.4	Braking control at train level: the driver's brake valve	357
10.1.7.3.4.1	Operating principles	357
10.1.7.3.4.2	Main functionalities	357
10.1.7.3.4.3	The different types of driver's brake valves	359
10.1.7.4	Application of the compressed-air pneumatic brake to passenger trains	360
10.1.7.5	The electro-pneumatic assistance (EP brake)	360
10.1.7.5.1	Introduction	360
10.1.7.5.2	Operating principles of the indirect EP brake	362
10.1.7.5.2.1	General case	362
10.1.7.5.2.2	Particular case of multiple unit trains	362
	The vacuum brake	363
10.1.8	The direct electro-pneumatic brake	364
10.1.8.1	Historical references	364
10.1.8.2	Operating principles	364
10.1.8.3	Technical description	365
10.1.8.3.1	Service braking control	365
10.1.8.3.1.1	Brake demand generation	365
10.1.8.3.1.2	Brake control of vehicles or bogies	365
10.1.8.3.2	Emergency braking control	366
10.1.8.3.2.1	Brake demand generation	366
10.1.8.3.2.2	Brake control of vehicles or bogies	366
10.1.8.4	The main components of the direct electro-pneumatic brake	367
10.1.8.4.1	The graduable magnet valve	367

10.1.8.4.2 The analogue converter	367
10.1.8.4.3 A comparison to conclude	368
Electronic brake systems for freight trains	368
A. Introduction	368
B. ECP: The electronically controlled pneumatic brakes	369
B1. ECP brake architecture	369

10.1.13.5.2	Make-up of the device	397
10.1.13.5.3	The magnetic track brake	397
10.1.13.5.4	The suspension system	398
10.1.13.5.5	Force transmission	399
10.1.13.5.6	Use of the magnetic track brake	399
10.1.14	Brake blending	399
10.1.14.1	Introduction	399
10.1.14.2	Design principles of brake blending strategy	399
10.1.15	Introduction to adhesion management: Wheel slide protection	400
10.1.15.1	Historical references	400
10.1.15.2	The different types of wheel slide protection devices	400
10.1.15.2.1	The first-generation wheel slide protection, acting "on-off"	400
10.1.15.2.2	The second-generation wheel slide protection, slide regulation type	401
10.1.15.2.2.1	General	401
10.1.15.2.2.2	Operating principles	402
10.1.15.2.2.3	The low-slide wheel slide protection	403
10.1.15.3	Wheel-rotation monitoring device	403
10.1.15.4	Monitoring of the wheel slide protection equipment	404
10.1.15.4.1	Safety timer (watchdog)	404
10.1.15.4.2	Equipment tests	404
10.1.15.4.2.1	Automatic tests	404
10.1.15.4.2.2	Manually triggered tests	404
10.2	Compressed air generation treatment, storage and distribution	405
10.2.1	Introduction	405
10.2.2	Structure of the compressed air production and distribution	406
10.2.2.1	Preamble: main air production and auxiliary air production	406
10.2.2.2	Structure of generation, treatment, storage and distribution devices	406
10.2.2.2.1	Main air production	406
10.2.2.2.2	Auxiliary air production	407
10.2.3	The compressed air generation	407
10.2.3.1	Functional allocation	407
10.2.3.2	Introduction: towards the oil-free compressed air production	407
10.2.3.3	The reciprocating compressor (oil lubricated)	407
10.2.3.3.1	Presentation	407
10.2.3.3.2	Advantages	408
10.2.3.3.3	Drawbacks	408
10.2.3.3.4	Typical applications	409
10.2.3.4	The reciprocating compressor (oil-free)	409
10.2.3.5	The screw compressor	410
10.2.3.5.1	Presentation	410
10.2.3.5.2	Advantages	411
10.2.3.5.3	Drawbacks	411
10.2.3.5.4	Typical applications	411
10.2.3.6	The scroll compressor	411
10.2.3.7	The vane compressor	412
10.2.3.8	The compressor drive	412
10.2.3.9	Control of the delivered pressure	413
10.2.3.9.1	Pressure range	413
10.2.3.9.2	Control strategy	413
10.2.3.10	The compressor dimensioning constraints	414
10.2.3.10.1	Air flow rate	414
10.2.3.10.1.1	The compressed air consumption on a route	414
10.2.3.10.1.2	The compressed air consumption at power on of the train	414

10.2.3.10.2	Compressor's duty cycle	414
10.2.3.10.3	Number of starts per hour	415
10.2.4	The compressed air treatment	415
10.2.4.1	Functional allocation	415
10.2.4.2	Notion of quality of the air	415
10.2.4.3	Quality of the compressed air used in railway operation	416
10.2.4.4	Treatment of the solid pollutants	416
10.2.4.5	Treatment of the oil pollutants	417
10.2.4.6	Treatment of the "water" pollutant	417
10.2.4.6.1	Drying techniques	417
10.2.4.6.2	Drying through adsorption	418
10.2.4.6.3	Membrane drying	419
10.2.4.7	The draining of the condensates	419
10.2.5	The installation of the air generation units on board the vehicles	419
10.2.6	Compressed air storage and distribution	420
10.2.6.1	Functional allocation	420
10.2.6.2	Storage of the compressed air	420
10.2.6.3	Protection	421
10.2.6.4	Distribution of the compressed air	421

Chapter 11: Locomotives 423

11.1	Introduction and scope	424
11.2	The generic locomotive	425
11.2.1	The principles of a locomotive	425
11.2.2	Characterisation of locomotives	426
11.2.2.1	The 4-axle locomotive	426
11.2.2.2	The 6-axle locomotive	426
11.2.2.3	Locomotives with 8 and 12 axles	427
11.2.2.4	Power heads	427
11.2.2.5	Electric locomotives	427
11.2.2.6	Diesel locomotives	428
11.2.2.7	Characterisation by country of operation and on-board ATP systems	428
11.2.2.8	The 4-axle versus 6-axle locomotive	428
11.2.3	Locomotive performance	429
11.2.3.1	The tractive effort versus speed diagram	429
11.2.3.2	The locomotive as the ultimate adhesion machine	430
11.2.3.3	Adhesion utilisation at braking	434
11.2.3.4	Maximum braking effort and power regeneration	434
11.2.4	Comparison of electric with diesel-electric locomotives	437
11.2.4.1	Performance ratings	437
11.2.4.2	Energy costs	440
11.2.4.3	Maintenance costs	441
11.2.5	Locomotive specific designs	442
11.2.5.1	Carbody and layout	442
11.2.5.2	Driver's cab	444
11.2.5.3	Locomotive propulsion	444
11.2.5.3.1	Locomotive traction converters	445
11.2.5.3.2	Locomotive auxiliary circuits	446
11.2.5.3.3	Locomotive drive systems	447
11.2.5.3.4	The group drive	447
11.2.5.3.5	The single-axle drive	447
11.2.5.4	Locomotive air supply	448
11.2.5.5	Locomotive bogies and running performance	448
11.2.5.5.1	Track forces and ride quality	449
11.2.5.5.2	Design for low wheel wear	449
11.2.5.5.3	Friction brakes	450
11.2.5.5.4	Locomotive wheels	451
11.2.5.5.5	Flange lubrication	451
11.2.5.6	Data communication and controls	451
11.2.5.7	Train safety systems and ETCS	452
11.2.5.7.1	Legacy ATP systems	452
11.2.5.7.2	Implementing ETCS on locomotives	453
11.2.5.8	Redundancy, availability, and reliability	453

11.2.5.8.1 Redundancy	453
11.2.5.8.2 Availability and Reliability	454
11.2.6 Interfaces	455
11.2.6.1 Interfaces to the train	455
11.2.6.2 Interfaces to the railway network	456
11.2.7 Operational aspects	457
11.2.7.1 Modes of operation	457
11.2.7.2 Automation of functions	458
11.2.8 Safety of software	458
11.2.9 Authorisation	459
11.3 Types of locomotives	459
11.3.1 Power heads for high speed	459
11.3.2 Heavy haul locomotives	461
11.3.3 North American passenger locomotives	461
11.3.3.1 Diesel-electric locomotives	461
11.3.3.2 Electric locomotives	462
11.3.4 Diesel-hydraulic locomotives	462
11.4 From the universal locomotive to modern platforms	462
11.4.1 Universal locomotives with thyristor control	463
11.4.2 The GTO leads to the breakthrough of locomotives with AC propulsion	465
11.4.2.1 The first high power GTO locomotives	465
11.4.2.2 Railways take advantage of AC-technology	466
11.4.3 The locomotive market changes	467
11.4.3.1 The end of the universal locomotive	467
11.4.3.2 Railway re-structuring	468
11.4.3.3 Rail liberalisation and open access	468
11.4.3.4 New cross-border locomotives in Germany	469
11.4.3.5 New cross-border locomotives in France	469
11.5 Modularisation and the development of locomotive platforms	470
11.5.1 Creating a locomotive platform	470
11.5.1.1 What is a locomotive platform?	470
11.5.1.2 Modularisation	471
11.5.1.3 Benefits of a locomotive platform to the railway	472
11.5.1.4 Examples of locomotive platforms	473
11.5.2 The evolution of the Prima platform	473
11.5.2.1 Prima I	473
11.5.2.2 The Prima DE33 B AC	474
11.5.2.3 Prima II	474
11.5.3 The evolution of the TRAXX platform	474
11.5.3.1 TRAXX AC1	474
11.5.3.2 TRAXX AC2	474
11.5.3.3 TRAXX MS, DC, and DE	474
11.5.3.4 TRAXX AC3	474
11.5.3.5 TRAXX DE with multi-engines	475
11.5.4 The evolution of the Vectron platform	476
11.5.4.1 The EuroSprinter family	476
11.5.4.2 The Eurorunner	476
11.5.4.3 An intermediate step	476
11.5.4.4 The Vectron platform of AC, DC, MS and DE locomotives	477
11.5.5 Locomotives for all applications	478
11.6 Outlook	479
11.7 List of locomotives developed with 3-phase traction	479
Chapter 12: Driver's cabs and train operation	487
12.1 Introduction	488
12.2 Types of cabs	488
12.2.1 Central cab	488
12.2.2 Front cab	488
12.3 Driver's seat: right, middle or left?	489
12.4 Towards a European driver's desk	489
12.4.1 The UIC 651 – the first common standard	489
12.4.2 The European Driver's desk, EUDD, EUDD plus and the UIC 612	490
12.4.3 The EN 16186 – driver's cabs for European interoperable rolling stock	492

12.4.4	Cab displays	494
12.5	Function standardisation for safe and efficient operation	494
12.6	Requirements for cab layout and driver ergonomics	495
12.7	Operational modes	496
12.8	Urban railways	497
Chapter 13: Outlook		499
Introduction		500
Current situation of the railway sector: needs, drivers and challenges		500
13.1	Technologies for the European passenger rolling stock	501
13.1.1	Current situation of the railway sector: needs, drivers and challenges	502
13.1.2	Identification of specific areas for innovation	503
13.1.3	Developing technologies for rolling stock of the future	503
13.1.3.1	New technologies for traction	504
13.1.3.1.1	Current state of the art and recent developments	504
13.1.3.1.2	Technological lines for future development	506
13.1.3.1.3	Silicon-Carbide (SiC) based power electronics	506
13.1.3.2	New technologies for train control	508
13.1.3.2.1	Current state of the art and limitations of existing technology	508
13.1.3.2.2	On-going development and Incremental innovation	509
13.1.3.2.3	Technological opportunities and future development lines	509
13.1.3.3	New technologies for carbody structures	511
13.1.3.3.1	Current state of the art and recent developments	511
13.1.3.3.2	Technological lines for future development	511
13.1.3.4	New technologies for running gear	513
13.1.3.4.1	State of the art and recent developments	513
13.1.3.4.2	Technological lines for future development	515
13.1.3.4.3	Mechatronic bogie control systems	515
13.1.3.5	New technologies for brakes	516
13.1.3.5.1	Desired improvements and limitations of the current state of the art	517
13.1.3.5.2	Technological lines for future development	518
13.1.3.6	New technologies for train accessibility	520
13.1.3.6.1	Current state of the art and foreseeable evolution	520
13.1.3.6.2	Technological lines for future development	520
13.1.3.7	Modular train interiors	521
13.1.3.7.1	Limitations of the current state of the art and desired impact	521
13.1.3.7.2	Technological lines for future development	522
13.1.4	Long term evolution of passenger rolling stock in Europe	523
13.1.4.1	Emerging long-term trends and visions that will affect rolling stock	523
13.1.4.2	What will the rolling stock of the future look like?	524
13.2	Challenges of automation for urban rail rolling stock	526
13.3	Perspectives for rail freight	528
13.3.1	Outlook on European rail-freight	528
13.3.1.1	Past developments that influence the present situation	528
13.3.1.2	Present situation and future	529
13.3.1.2.1	Diagnosis	530
13.3.1.2.2	Automatic couplers	530
13.3.1.2.3	Automatic brake test	531
13.3.1.2.4	Regular interval timetable	531
13.3.1.3	General discussion	532
13.3.1.4	Conclusion	532
13.3.2	Future trends in North American freight rolling stock	533
